The Great Barrier Reef

The World's Largest & Most Extensive Coral Reef System

The Great Barrier Reef is a system of coral reefs stretching for over 2,600 km along the northeastern coast of Australia. It is the world's largest coral reef system and is a UNESCO World Heritage Site. The reef is home to thousands of species of fish, including many species of coral and marine life. The reef is also home to many different types of marine mammals, including dolphins, seals, and whales. The reef is a major tourist destination for people from all over the world, and it is also a critical habitat for many different species of fish and marine life.
